# DIGITAL LITERACY REPORT

Name : Rahul Rahangdale

Reg No.: 25MIM10035

Branch: Integrated M.Tech (AI)

Year: 1st Year

Course Code: CSE0001

Date: 24 March 2026

# Introduction

This project focuses on developing digital literacy and awareness among students. In today's digital world, it is important to understand how to use technology safely and effectively. This project includes tasks such as creating an infographic, building a digital portfolio, designing a quiz, writing professional emails, and learning about cybercrime. Each task helped me improve my practical knowledge and digital skills. Through this project, I learned how to use online tools responsibly, communicate professionally, and stay safe on the internet. Overall, this project enhanced my understanding of digital literacy and its importance.

# Task 1: Digital literacy Infographic

In this task, I created an infographic using Canva to explain digital literacy. The infographic included topics such as safe internet practices, useful digital tools, and responsible online behavior. Canva helped me design the infographic in a visually appealing way using colors, icons, and simple text. I focused on making the content easy to understand so that students can learn quickly. This task improved my creativity and presentation skills. I also found it interesting to convert theoretical knowledge into a visual format. Overall, this task helped me understand how visual communication can make learning more effective.

# Task 2: Student Digital Portfolio

In this task, I created my digital portfolio using platforms like GitHub, LinkedIn, and Kaggle. I updated my profiles with my education details, skills, and interests. These platforms are useful for building a professional online presence. GitHub is used to showcase projects, LinkedIn helps in networking, and Kaggle is useful for data science practice. This task helped me understand the importance of maintaining a professional identity online. It also gave me confidence to use these platforms for future internships and career opportunities.

# Task 3: Digital Literacy Quiz and Coding Practice

In this task, I worked on two activities: solving a coding problem on HackerRank and creating a quiz using Google Forms. On HackerRank, I solved a basic programming problem which helped me improve my logical thinking and coding skills. It gave me hands-on experience in writing and understanding code.

In the second part, I created a quiz using Google Forms based on digital literacy. I added multiple-choice questions, set correct answers, and assigned marks. I also enabled email collection to track responses. This helped me understand how to create interactive quizzes and evaluate responses.

Overall, this task improved both my technical skills and my ability to use digital tools for learning and assessment.

# Task 4: Email Etiquette

In this task, I learned how to write a professional email. I created an email with a proper subject line, greeting, body, and closing. The email was written in a formal and polite tone. This task helped me understand the importance of clear communication and proper email structure. I learned how to avoid informal language and maintain professionalism in writing. This skill is very useful for academic and professional communication.

# Task 5: Cybercrime

In this task, I learned about cybercrime, especially phishing attacks. I was surprised to see how easily people can become victims by clicking on fake links or sharing personal information. Many cyber attacks look very real, which makes them dangerous.

This task made me more aware of online safety. I will now always verify links before clicking and never share OTPs or passwords with anyone. I will also use strong passwords and enable two-factor authentication for better security.

Overall, this task helped me understand the importance of staying alert while using the internet.

# Conclusion

This project helped me improve my digital literacy skills and awareness. I learned how to create visual content, build a digital portfolio, design quizzes, write professional emails, and understand cyber security. Each task provided practical knowledge and improved my confidence in using digital tools.

Overall, this project was very useful and helped me understand the importance of safe and responsible use of technology in daily life.
